W D Williams, *University of Adelaide*

Guest Editors

L Borre, *LakeNet/Monitor International, USA*
D R Barker, *LakeNet/Monitor International*

Lakes around the world have been the lifeblood of civilizations, but recent reports indicate that the world's lakes are in crisis as a result of human activities. In response to this crisis, LakeNet was established in 1997 to facilitate the exchange of experience, practices and technologies related to the management of lake watersheds. Although much can be gained from networking and sharing experience at a global level, solutions to the problems facing lakes must be found within each lake region itself.

At the 8th International Conference on the Conservation and Management of Lakes in Copenhagen, Denmark, 17-21 May 1999, LakeNet organized a workshop for community leaders and practitioners from eight of the "great lakes" of the world to share their experience in implementing a watershed-based approach.

This special edition contains the eight case studies presented during the workshop and a synthesis article prepared by the workshop organizers.
